Components of a Control Chart Control charts show time-ordered plotted points around a center line. The center line is determined by calculating the mean of the plot points, typically about 20 to 25 points. The upper (UCL) and lower control limits (LCL) are typically set at +/- 3 standard deviations of the plot points.

But what about other chart types? Can we derive similar results from them? In this example, we combine two line charts with a bar chart. By putting trend lines for sales price and quantity side-by-side at the top, we guide the viewer's focus toward a comparison of these two trends. There is a clear negative correlation, right? Yes.
